

Lab 4: VibeCoding - Tug of War

Chat history with Claude Code (Claude Sonnet 5.5) - user messages verbatim, assistant replies condensed

ME

Run the Python based code (A game/ A Puzzle)

CLAUDE

No game script found in the home folder, so I wrote a small 8-puzzle with an A* solver and ran it. Scrambled board solved in 8 optimal moves. (Terminal can't take keyboard input, so it auto-solves.)

ME

https://github.com/DBS13062006/56_tug_of_war this is what I want u to finish
C:\Users\bhuva\Downloads\Lab_4_VibeCoding_Student_handout.pdf

CLAUDE

Read the handout and cloned the repo. README lists one deliberate bug and three features: (1) alternating-input deadlock, (2) AI panic surges, (3) rope tension and puller leaning animations, (4) match timer with sudden death at 45 s. Plan: one commit per task, no PR to the main repo.

CLAUDE

Task 1 - The pull lock was only released on KEYUP of the last key, so overlapping presses were dropped. Removed the lock; a pull registers on every KEYDOWN that differs from the last pulling key. Headless test: 10 overlapping presses gave 10 pulls. Committed.

CLAUDE

Task 2 - Panic surge when the marker passes 40% of the way to the player's goal: computer cooldown 180 ms to 85 ms, pull strength 1.4-2.0x, "COMPUTER PANIC SURGE!" label. Committed.

CLAUDE

Task 3 - Added a momentum value. Rope is a polyline that sags when slack and vibrates under high tension; pullers lean backward in proportion to their side's momentum. Verified on a rendered frame. Committed.

CLAUDE

Task 4 - Live MM:SS timer; at 45 s "SUDDEN DEATH - DOUBLE POWER!" doubles all pulls; R resets the timer. Verified in a rendered frame. Committed. Noted that videos, chat export and the push were still outstanding.

ME

record the video for me please as well

CLAUDE

Built a headless recorder with a fake clock and scripted key presses. Rendered before_changes.mp4 (original commit 713b14d: dropped inputs, computer wins) and after_changes.mp4 (all four tasks visible, player wins). The "after" clip starts the clock at 41 s so sudden death shows within 10 s. Saved both in Lab-4 and committed.

ME

I NEED A CHAT INTERFACE

CLAUDE

Assumed this means the "chat history exported as a doc/pdf" deliverable. Built this chat-style page and exported it to PDF in Lab-4.
