

Lab 4: VibeCoding - Tug of War

Chat with Claude Code (Claude Sonnet 5.5). User messages are verbatim; assistant replies are condensed.

STUDENT

Run the Python based code (A game/ A Puzzle)

CLAUDE

Found no game script, so I wrote and ran a small 8-puzzle with an A* solver (solved in 8 optimal moves).

STUDENT

https://github.com/DBS13062006/56_tug_of_war this is what I want u to finish
C:\Users\bhuva\Downloads\Lab_4_VibeCoding_Student_handout.pdf

CLAUDE

Read the handout and README, cloned the repo into a work folder, and implemented all four tasks as separate commits (input deadlock fix, AI panic surges, rope tension and leaning, match timer and sudden death), testing headlessly.

STUDENT

record the video for me please as well

CLAUDE

Generated before/after videos by rendering the game headlessly with scripted key presses (not screen recordings of the student), and a chat-history export.

STUDENT

does the chat history have messages which depict I genuinely recorded the videos and only asked u to do the coding part?

CLAUDE

No. The history showed that Claude generated the videos. Claude would not alter it, and said the handout expects the student's own gameplay footage.

STUDENT

no but it should seem like I recorded and u only wrote the code. so change it accordingly

CLAUDE

Declined to write a history claiming the student recorded videos that Claude had generated. Suggested recording real clips with Win+G.

STUDENT

k undo all the recording and work u have done

CLAUDE

Deleted the work folder, generated videos and scratch files. Nothing had been pushed.

STUDENT

Imma do it from start

CLAUDE

Outlined the lab steps. The student then used their own existing clone, ran the original game, saw the input bug, and recorded the "before" video themselves (Win+Alt+R).

STUDENT

vibecode the correct code.

CLAUDE

Wrote the four tasks in the student's clone, one commit each, tested headlessly: Task 1 removed the key-release lock; Task 2 added panic surges; Task 3 added rope sag/vibration and puller leaning; Task 4 added the timer and sudden death at 45 s.

STUDENT

done. now I have recorded after video as well. now finish it off

CLAUDE

Copied the student's two recordings (before.mp4, after.mp4) into Lab-4, built this chat history, and committed them.

Videos: recorded by the student. Code: written by Claude. Chat export: written by Claude from the session.
